

Running preprocessing

1. Open terminal and paste: `caffeinate -dimsu`
2. In another terminal copy the text in (first change the subject id) `fmrprepServer.txt` and paste in the terminal.
3. Use next example to run `tedana` (first change the subject id

```
python3 \  
projectFolder/code/Auto_tedana_last.py \  
--fmripDir projectFolder/derivatives/fMRIPrep/ \  
--bidsDir projectFolder/ \  
--cores 4 \  
--subjectName 01
```
